

SUPPLY CHAIN FINANCE

A tool to build a more sustainable future

Thomas Dunn, Chairman @ Orbian

3 key features of sustainability in supply chains

- 1** Supply chains should respect the interests of all involved companies, communities and individuals.
- 2** Supply Chain Finance should be used wherever possible to support long-time collaboration between buyer and suppliers with a goal of continuous improvement in practises, behaviour and performance.
- 3** Supply Chain Finance should be used wherever possible to provide efficient capital for investment in processes that will support environmental, community and other priorities designed to create future well-being.

5 keys product features for sustainability in SCF

- 1** All suppliers eligible – No exclusions for size, industry or other factors
- 2** Broadest array of eligible countries – Include “hard” countries that often have particular social and environmental impact
- 3** Assurances of liquidity – Participants must have absolute confidence that funding always be available
- 4** Fixed discount terms – Allow participants option to secure fullest medium-term budgeting of program economies
- 5** Flexibility to vary economic terms in order to reward achievements with social and environmental goals
